

LANCASTER WATER RECLAMATION PLANT

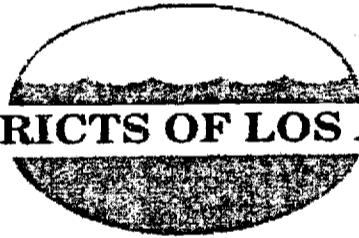

ANNUAL MONITORING REPORT

2002

RWQCB ORDER NO. R6V-2002-053

**MONITORING & REPORTING
PROGRAM NO. R6V-2002-053**

SANITATION DISTRICTS OF LOS ANGELES COUNTY

LANCASTER WATER RECLAMATION PLANT

CHAPTER 4

WASTEWATER MONITORING DATA

CHAPTER 4
2002 WASTEWATER MONITORING DATA

4.1 ORGANIZATION OF THE DATA

The monitoring programs at the Sanitation Districts wastewater treatment plants can be rather complex; consequently, the following explanation is provided to aid in interpreting the data.

Data are maintained in two databases:

1. An **operational database** for data which normally are monitored daily or weekly and are used for the day-to-day operation of the plants. These include flow, BOD, suspended solids, etc. Many of the parameters included in the operational database must be monitored and reported in accordance with the requirements listed in the NPDES permit, waste discharge requirements or reuse permit of each plant.

Monthly and annual averages are presented along with other descriptive statistics.

2. A **laboratory database** for data which normally are monitored monthly or less often. These include primarily metals and organic compounds. Separate data summaries are presented for:
 - **Influent monitoring**
 - **Effluent monitoring**

Each treatment plant has operation and laboratory data sets presented in its own annual report. One exception is the San Jose Creek WRP which consists of two independently operated units; San Jose Creek East (Stages I and II) and San Jose Creek West (Stage III). Separate data sets for each of these plants is presented in the San Jose Creek WRP annual report. The results of all samples are presented together with descriptive statistics. This data summary may contain results which were not reported in monthly monitoring reports. These additional data can result from sampling conducted for purposes other than routine monitoring. The additional sampling may be done by other agencies (Regional Water Quality Control Board or USEPA) or by the Sanitation Districts for a special study or as a sampling follow-up to a questionable sample.

4.2 LABORATORY TEST CODES

The Sanitation Districts use a unique 3-character code to identify each constituent in the laboratory database. Priority pollutants and other significant constituents are organized into the following groups:

Test Group	Test Code Series
Physical Properties and Solids	100
Nitrogen and Sulfurs	200
Miscellaneous	300
Carbons	400
Chlorinated Pesticides and PCBs	500
Volatile Organic Compounds	600
Metals	700
Base-Neutral/Acid Extractable Compounds	800
Dioxins	D00
Furans	F00

In the laboratory data summaries, the constituents are sorted in numerical order according to the test code. Both the constituent name and test code are given at the top of each column in the data summary. Table 4-1 is provided for assistance in finding specific constituents in the summaries. One can first look for the desired constituent in this table (arranged alphabetically) to find the test code. Then, knowing the test code, one can find the desired constituent and its data in the tables which follow Table 4-1 (arranged in numeric order).

Statistical summaries follow the influent and effluent data and effluent limits follow the effluent statistical summaries.

4.3 DETECTION LIMITS

Sample results below the method detection limits are indicated by the use of the less than symbol (<). A few parameters, such as DDT and PCBs are reported as sums. In those cases, we have chosen to report total detected DDT and total detected PCBs. Results which were below the detection limit were not included in the sum. Consequently, if none of the isomers were detected, the total is reported as zero.

4.4 PERMIT LIMITS

A single plant may have several permits and several sets of limits which, at a maximum, consist of the following:

- **NPDES Permit Limits** for discharge to navigable waterways.
- **Waste Discharge Requirements** for effluent disposal to sites other than those covered by NPDES requirements (e.g., Lancaster and Palmdale WRPs).
- **Reuse Permit Limits** for nonpotable use in irrigation, impoundments, etc.
- **Recharge Permit Limits** for groundwater replenishment in the Montebello Forebay.
- **California Drinking Water Standards** are included by reference in many reuse permits and in the recharge permit. Drinking Water Standards are specified in Title 22, Chapter 15, Article 3, Sections 64421-64473 of the California Code of Regulations. Note the following:
 1. Primary Drinking Water Standards are health-related.
 2. Secondary Drinking Water Standards are not health-related. They are concerned with palatability and aesthetic acceptance.
- **Radioactivity requirements** are included by reference in most permits. Radioactivity requirements are specified in Title 22, Chapter 15, Article 3, Sections 64441-64443 of the California Code of Regulations. The radioactivity standards are a subset of the drinking water standards; however, the permits use language which suggests that radioactivity should be treated separately from the drinking water standards. The permits have separate paragraphs requiring compliance with radioactivity standards and with drinking water standards. Furthermore, the permits require compliance only for trace constituents or other substances

in the drinking water standards, which suggests that radioactivity is not a substance, but, rather, is a quality.

- **Action Levels** of the California Department of Health Services (DHS) are included by reference in the recharge permit. Action levels are given in a letter dated October 24, 1990 from the DHS Office of Drinking Water.
- **Taste and Odor Thresholds** are listed in the DHS Action Levels for several constituents; however, these thresholds are not considered to be applicable to reclaimed water as it is not delivered directly to users for use as potable water.

The permits limits may be expressed in terms of an instantaneous maximum, daily maximum, 7-day average and/or 30-day average. Longer averaging periods have lower limits. In general then, the limits listed in Table 4-4 are 30-day averages (which have the lowest values).

The reuse permits require compliance with the Drinking Water Standards maximum contaminant levels that normally apply to 24-hour composite samples or grab samples. The Montebello Forebay permit, however, requires compliance with the Drinking Water Standards and action levels based on a running 12-month average.

* Evaporation rates from evaporation gauge are adjusted to reflect effects from rainfall on gauge readings.

This value is multiplied by a factor of 0.7 (for type A gauges), by the estimated area of the Paiute Pond (400 acres), and by the appropriate conversion factors to estimate average monthly evaporation in Paiute Ponds in MGD.

SYMBOL	EXPLANATION
	NO DISCHARGE UNDER THIS BOARD ORDER ON THIS MONTH. THE SUMMARY REFLECTS ALL DATA SHOWN.
A	PARTIAL OR NO SAMPLE OBTAINED DUE TO SAMPLER MALFUNCTION.
B	ERROR IN TESTING PROCEDURE. INVALID RESULTS OBTAINED.
C	INSUFFICIENT SAMPLE VOLUME FOR PERFORMING ALL TESTS.
D	HOLIDAY WORK SCHEDULE. INSUFFICIENT MANPOWER TO PERFORM ALL TESTS.
E	INSUFFICIENT MANPOWER TO PERFORM ALL TESTS.
F	NECESSARY TESTING EQUIPMENT OUT OF SERVICE.
G	FLOW METER OUT OF SERVICE.
H	TURBIDITY VALUES ARE ROUNDED TO THE NEAREST WHOLE NUMBER (E.G., 2.5=2, 2.6=3) FOR THE PURPOSE OF DETERMINING COMPLIANCE WITH THE TURBIDITY LIMIT.
I	THE NO. OF COLIFORMS MUST NOT EXCEED 23/100 ML IN MORE THAN ONE SAMPLE DURING ANY 30-DAY PERIOD.
J	AVERAGE VALUE.
K	VALUE CALCULATED FROM AVERAGE VALUE.
L	PLANT SHUT DOWN - APOLLO LAKES AT CAPACITY.
M	PLANT SHUT DOWN - DUE TO VARIOUS OPERATIONAL PROBLEMS
N	NO DISCHARGE.
Q	CHLORINATED SAMPLE.
R	EFFLUENT TO PAIUTE PONDS NOT TO EXCEED EVAPORATION RATE WHEN PONDS ARE OVERFLOWING.
S	GESE HUNTING SEASON RUNS FROM OCT. 15, 2002 TO JAN 26, 2003 DUCK HUNTING SEASON RUNS FROM NOV. 2, 2002 TO JAN. 26, 2003 THE 7-DAY MEDIAN NUMBER OF COLIFORMS MUST NOT EXCEED 2.2 MPN/100 ml DURING PERIODS WHEN THE PONDS ARE ACTIVELY BEING USED FOR DUCK HUNTING AND DURING THE 30 DAYS PRECEDING SUCH PERIODS.
T	INSUFFICIENT DATA TO CALCULATE 30 DAY AVERAGE.

TABLE 4-5
EFFLUENT TOXICITY DATA
LANCASTER WRP

FINAL EFFLUENT CHRONIC TOXICITY RESULTS 2002

TEST SPECIES ENDPOINT	%NOEC ^a	TUc ^a (NOEC)	%EC/IC25 ^b (95% CI)	% EFFECT IN 100% SAMPLE ^c
<i>Pimephales promelas</i> OCTOBER 2002				
Survival	100	1.0	>100 (N/A)	5.0 (-0.7 - 10.7)
Growth	40	2.5	57.6 (49.5 - 98.8)	32.4 (26.1 - 38.8)

a- NOEC (No Observed Effect Concentration) calculated using flow charts contained in the U.S. EPA method (EPA/600/4-91/002). TUc (NOEC) calculated as 100 / NOEC. The NOEC and associated TUc provides an incomplete and, in some cases, inaccurate estimate of toxicity, and results should not be averaged or used for evaluating multiple tests or samples.

b- EC/IC25 and associated 95% confidence intervals (95% CI) calculated using flow charts contained in the U.S. EPA method (EPA/600/4-91/002). TUc - (EC/IC25) calculated as 100 / EC/IC25. Provided that the estimates do not exceed the highest concentration tested (100%), the result is amicable to averaging and for evaluation of multiple tests and samples.

c- % effect in 100% sample calculated as the mean effect in 100% sample relative to the control using the formula: effect = [(mean_{control} - mean_{100% sample}) / mean_{control}] x 100. A negative result (-) indicates an enhancement relative to the control. This measurement is most useful for evaluating multiple tests and samples, particularly when point estimate results exceed the highest concentration tested.

N/A: Not applicable
