

1.7 RESPONSES TO LEISURE LAKE COMMENTS

Three comment letters and 30 form letters were received from residents of the Leisure Lake community opposing consideration of Storage Reservoir Study Area 3 as an alternative location of effluent storage reservoirs. In addition, a petition signed by over 150 people was submitted opposing Storage Reservoir Study Area 3.

COMMENT LETTER 67: DAVID TIMOK, NOVEMBER 18, 2003

Comment 67-1

The comment requests that Storage Reservoir Study Area 3 be removed from consideration in the Final EIR. Pursuant to CEQA requirements, the EIR must evaluate all reasonable alternative locations for each component of the project. Due to its proximity to the LWRP, Study Area 3 is a reasonable alternative location for storage reservoirs. Following an extensive evaluation process of a total of five alternative storage reservoir locations around the LWRP, District No. 14 eliminated Study Areas 1, 3, 4, and 5 from consideration and recommended that storage reservoirs be constructed in Study Area 2, which is north of the LWRP. The principal reason for rejecting Study Area 3 was the proximity of the Leisure Lake community near the intersection of Avenue E and SR-14. See Storage Reservoir Study Area 3 Master Response.

Comment 67-2

The comment letter included a petition that was signed by 267 people. The petition requests that Storage Reservoir Study Area 3 be removed from consideration in the Final EIR. See response to comment 67-1. See Storage Reservoir Study Area 3 Master Response.

Comment 67-3

The comment letter included 25 signed form letters as an attachment. The form letters express opposition to Storage Reservoir Study Area 3. See response to comment 67-1. See Storage Reservoir Study Area 3 Master Response.

COMMENT LETTER 68: DAVID TIMOK, OCTOBER 17, 2003

Comment 68-1

The comment requests that Storage Reservoir Study Area 3 be removed from consideration in the Final EIR citing odor, air quality, and environmental hazards as reasons for eliminating the alternative location. The Draft EIR evaluated potential effects of citing storage reservoirs in the area and identified mitigation measures to reduce the effects. Ultimately, Storage Reservoir Study Area 3 was rejected due to its proximity to the Leisure Lake community near the intersection of Avenue E and SR-14. See response to comment 67-1. See Storage Reservoir Study Area 3 Master Response.

COMMENT LETTER 69: SILVIE RODRIGUEZ

Comment 69-1

The comment requests that Storage Reservoir Study Area 3 be removed from consideration in the Final EIR. Pursuant to CEQA requirements for an analysis of feasible alternatives, the Draft EIR assessed several feasible sites to construct storage reservoirs, including Storage Reservoir Study Area 3. Chapter 5 of the Final EIR describes the storage reservoir study area screening process. Ultimately, Storage Reservoir Study Area 3 was rejected due to its proximity to the Leisure Lake community near the intersection of Avenue E and SR-14. See Storage Reservoir Study Area 3 Master Response.

Comment 69-2

The comment states that more than the three residents mentioned in the Draft EIR would be displaced if storage reservoir Study Area #3 was used. The Final EIR identifies residents within the footprint of the storage reservoir site. Neighboring residents would not be displaced.

Comment 69-3

The comment suggests that storage reservoirs could affect groundwater quality. The Final EIR evaluates potential impacts to groundwater quality from storage reservoirs on page 4-65. The Final EIR commits District No. 14 to implementing mitigation measures that would ensure protection of groundwater quality. See Groundwater Protection Master Response and Storage Reservoir Study Area 3 Master Response.

Comment 69-4

The comment states that the Draft EIR concludes that construction of storage reservoirs in Storage Reservoir Study Area 3 would result in increased nitrates in groundwater and would require more chemicals. The comment is referring to the Draft EIR's conclusions regarding Alternative 3 and is confusing this program alternative with the Storage Reservoir Study Area 3. Storage Reservoir Study Area 3 would not result in greater groundwater impacts or chemical storage than any of the other storage reservoir study areas.

Comment 69-5

The comment describes the stress that residents of Leisure Lake have endured associated with the prospect that storage reservoirs could be sited in Storage Reservoir Study Area 3. Pursuant to CEQA requirements, the EIR must evaluate all reasonable alternative locations for each component of the project. Following an extensive evaluation process of a total of five alternative storage reservoir locations around the LWRP, District No. 14 eliminated Study Areas 1, 3, 4, and 5 from consideration and recommended that storage reservoirs be constructed in Study Area 2, which is north of the LWRP. The principal reason for rejecting Study Area 3 was the proximity of the Leisure Lake community near the intersection of Avenue E and SR-14.

Comment 69-6

The comment states that District No. 14 intentionally minimizes potential effects of the project. The Draft EIR does not down-play the potential environmental effects associated with implementation of the LWRP 2020 Plan. The Draft and Final EIRs assesses environmental impacts pursuant to CEQA requirements. See Storage Reservoir Study Area 3 Master Response.

Comment 69-7

The comment states that constructing storage reservoirs in Storage Reservoir Study Area 3 would constitute a disproportionate impact to low-income elderly people living at the Leisure Lake community. Section 15131 of the CEQA Guidelines states that, “economic or social effects of a project shall not be treated as significant effects on the environment.” Nonetheless, the Final EIR discusses environmental justice issues on page 4-194. Chapter 5 of the Final EIR identifies the five feasible locations surrounding the LWRP that were evaluated for suitability in constructing storage reservoirs. District No. 14 eliminated Study Areas 1, 3, 4, and 5 from consideration and recommended that storage reservoirs be constructed in Study Area 2, which is north of the LWRP. The principal reason for rejecting Study Area 3 was the proximity of the Leisure Lake community near the intersection of Avenue E and SR-14. The Final EIR identifies the community on page 5-16.

Comment 69-8

The comment asks if a list of chemicals has been sent to the health department. The list of stored chemicals is submitted to the local fire department pursuant to State of California hazardous materials storage requirements. The Final EIR provides this information in Table 4.10-1.

Comment 69-9

The comment describes the history of the Redman. The comment is noted.

Comment 69-10

The comment asks why earlier notice was not provided for the public hearing and public review of the Draft EIR. See Public Notification Master Response.

Comment 69-11

The comment letter included a petition that was signed by 270 people. The petition requests that Storage Reservoir Study Area 3 be removed from consideration in the Final EIR. See response to comment 68-1. see Storage Reservoir Study Area 3 Master Response.

Leisure Lake

FOR ADULT HOUSING COMMUNITY

November 18, 2003

Sagar K. Raksit, Supervising Engineer
County Sanitation Districts of Los Angeles County
P.O. Box 4998
Whittier, CA 90607-4998

Dear Sir:

RE: Public Notice, File No. 14-00-00-00

I attended the public meeting in Lancaster, October 30, and made my comments on behalf of Goodyork Inc. and Summit Properties (dba Leisure Lake Mobile Estates), and the residents of Leisure Lake. I appreciate the cooperation of your staff, especially Stan, who I spoke with and expressed our concerns about the 2020 facilities plan. I am submitting this request for consideration prior to your recommendations to District 14.

The proposed alternative storage reservoir (study area 3 on your figure 7-5) is directly east and northeast of Leisure Lake. This 211 space senior community is located at the corner of 20th West and Avenue E. My request is that you remove study area 3 from the map, as an alternative storage site, or for any other use on the LWRP 2020 plan. If not removed from the map, then I request an environmental impact study to determine the effect of the storage reservoir upon the senior citizens of Leisure Lake, including health issues, air quality, water wells (the source of water for the park), and property values.

67-1

page 2

The proposed alternative storage south of Avenue D should be eliminated from the LWRP 2020 Plan Storage Reservoirs, and no storage area or other use, should ever be considered south of Avenue D. I am enclosing copies of petitions, and letters from residents who are concerned about the impact of this project on their lives and future. Thank you for your consideration. Please send me a copy of the final recommendation when available.

67-1

P E T I T I O N

We, the undersigned, petition the County Sanitation Districts of Los Angeles County to remove from the Lancaster Water Reclamation Plant 2020 Facilities Plan, the proposed alternative storage reservoir between West Ave D and West Ave E-8, bordered by 20th Street West and Sierra Highway.

67-2

Leisure Lake Mobile Estates, a senior community of more than 300 residents, is located directly across the street at Avenue E and 20th Street West. This reservoir would pose an environmental hazard, air quality would be affected producing unpleasant odor, degrade our well water, and adversely affect property values. No reservoir should be located at anytime south of Ave D.

Sagar K. Raksit
Supervising Engineer
County Sanitation Districts of Los Angeles County

Dear Sir:

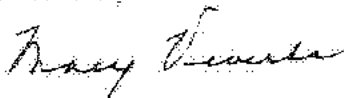

I live in Leisure Lake Mobile Home Park. This is a senior park which is located at 48303 20th St West, Lancaster, CA. It is situated in the southwest corner of the intersection of 20th St West and Avenue E. There are 241 mobile home spaces with a population of over 300 seniors in this park.

The Lancaster Water Reclamation Plant 2020 Facilities Plan and the Draft Environmental Impact proposes an alternative storage reservoir to be located south of Avenue D all the way to Avenue L-4. This means sewer reclamation ponds would be located just north and east of our park.

This is unacceptable. I oppose this location of a storage reservoir location because it would severely reduce the air quality, add to the potential of degrading our ground water and thus our water supply, and adversely affect park home property values.

I ask that your office eliminate this alternative storage reservoir location from the 2020 Facilities Plan. It has the real potential of adversely affecting the health and quality of life for over 300 senior citizens who live at Leisure Lake Mobile Home Park.

Yours Truly,

48303 20th St West Spc # F7
Lancaster, CA 93534

67-3

Sagar K. Raksit

County Sanitation Districts of Los Angeles County

Dear Sir:

We live in Leisure Lake Mobile Home Park. This is a senior park which is located at 48303 20th St West, Lancaster, CA. It is situated in the southwest corner of the intersection of 20th St West and Avenue E. There are 211 mobile home spaces with a population of over 300 seniors in this park.

The Lancaster Water Reclamation Plant 2020 Facilities Plan and the Draft Environmental Impact proposes an alternative storage reservoir to be located south of Avenue D all the way to Avenue E-4. This means sewer reclamation ponds would be located just north and east of our park.

This is unacceptable. We oppose this location of a storage reservoir location because it would severely reduce the air quality, add to the potential of degrading our ground water and thus our water supply, and adversely affect park home property values.

We ask that your office eliminate this alternative storage reservoir location from the 2020 Facilities Plan. It has the real potential of adversely affecting the health and quality of life for over 300 senior citizens who live at Leisure Lake Mobile Home Park.

Yours Truly,

Wallace T. Buchholz

Leisure Lake

AN ALLEY MOBILITY COMMUNITY

October 17, 2003

Sagar K. Raksit, Supervising Engineer
County Sanitation Districts of Los Angeles County
P. O. Box 4998
Whittier, CA 90607-4998

Dear Sir:

RE: Public Notice, File No. 14:00-00.00

The proposed alternative storage reservoir located south of Avenue D to approximately Avenue E-4, between 20th Street West and Sierra Highway, is directly east and northeast of Leisure Lake Mobile Estates. This 211 space senior community is located at the corner of 20th West and Avenue E.

The proposed storage reservoir would directly impact over 300 senior citizens. Locating the reservoir in this area would be an environmental hazard; affect the air quality; produce an unpleasant odor; affect the well water which supplies the Park; and would lower property values.

68-1

For the reasons stated above, the proposed alternative storage south of Avenue D should be eliminated from the LWRP 2020 Plan Storage Reservoirs, and no storage area should ever be considered south of Avenue D (see attached photos and map).

Sincerely,

David Timok

Getting to Leisure Lake

Going North or South on the Antelope Valley Freeway, exit at Avenue F. Then, go east to 20th Street (first left from the Freeway). Go north to entrance to Leisure Lake.

Our Community.....

a commitment to our people!

A HOMEOWNERS ASSOCIATION*

to represent us in city and county offices with regards our rights as mobile home owners in the state of California

A RECREATION CLUB*

that sponsors many, many social functions throughout the year.:

- * Friday Night Dinners
- * Friday Night Bingo
- * An Annual Las Vegas Night
- * FREE Birthday Dinners
- * Poker and Bridge Nights
- * Tai-Chi & Chair Exercises
- * Special Affairs for Holidays
- * Pool Tournaments
- * Miniature Golf Tournaments

PLUS

* An annual Hawaiian Luau featuring a gourmet feast and first-class entertainment.

* Our Homeowners Association has more than 110 paid members @ \$1.00 per year. All residents are members of the Recreation Club. Officers for both groups are elected by Leisure Lake residents at a regularly scheduled meeting. We also have more than 60 residents who are paid members of the GOLDEN STATE MOBILHOME OWNERS LEAGUE, INC., a state-wide organization that lobbies for mobile home owners' rights in Sacramento.

Leisure Lake

...a peaceful unhurried lifestyle where good neighbors become great friends...

Contentment is of the fulfillment of what you want, but the realization of what you already have.

Stability since 1980

The first mobile home was installed in Leisure Lake Park in 1975 and by 1987 there were 211 double-wide and triple wide mobile homes situated in a 35 acre oasis in the high desert area of the Antelope Valley.

Leisure Lake has had the same owners since 1980, and although management has changed a few times, the Park has been maintained so well over the years that it still retains its original beauty and grandeur.

A maintenance staff works seven days a week keeping Leisure Lake up to the standards of a five-star mobilehome park, the highest rating given to mobile home communities in California.

Space rents are quite moderate and affordable for Seniors living on fixed incomes. And, in spite of inflation and higher prices during the past 20 years, space rent increases have always been minimal, well below or just at Consumer Price Index allowable increases.

Leisure Lake is ideal for adults seeking an affordable, serene environment.

The overall concept

The overall concept of the Leisure Lake developers was to bring the residents a beautifully planned environment where they may live the finest lifestyle and still have one of the greatest values in senior housing. That concept prevails today.

The relaxed, out-of-the-way, small town atmosphere gives each resident a feeling of belonging to a community that is just not possible in our growing cities.

Estate-like homes

Each home space has been designed so that each mobile home is recessed into the ground, eliminating high steps and unsightly skirting found in most mobile home parks.

This provides a natural residential setting among beautiful landscaping, inviting tree-lined walkways and well lighted winding streets. All Leisure Lake homes are placed to give each home maximum space for maximum privacy along with finest scenic views possible.

Because of this, Leisure Lake homes are always in demand by first time mobile home buyers or owners of previous mobile homes in other locations.

A peaceful community...

Located just a few miles from the hustle and bustle of urban traffic, Leisure Lake Seniors can enjoy a cordial atmosphere among friendly people. For laid-back recreation, Leisure Lake offers a seven acre man-made lake for fishing. The beauty of the lake attracts ducks, geese and other wildlife throughout the year providing a peaceful, relaxing setting. No power boats or jet skis...just peace and quiet.

Where there's lots of fun!

Leisure Lake offers amenities designed solely for adult seniors. The swimming pool and therapeutic whirlpool spa is open most hours for adults only.

In the spacious Club House, two full size billiard tables are in constant use. A library with fireplace or a card room can be used for private meditation or for small groups to meet. In addition, a fully equipped kitchen is available for Leisure Lake club activities or for residents to use for private celebrations.

There is a constant bevy of activities at Leisure Lake. When you move in...the fun begins!

Save The Seniors

To whom this may concern:

My name is Silvio Rodriguez, and I am trying to help save the senior citizens in the small community of REDMAN CA, (Lancaster) by proposing the Alternative Reservoir #3 be taken off of the map. It is NOT enough to say alternative #3 is the least desirable or that #3 "probably" will never be used. All possibilities ARE possible. If you are that sure, that alternative #3 won't be needed, then it shouldn't be any trouble at all to "Remove IT" from the map.

I am talking about the "211" individual residences, and its 300+ Home owning residents, who live in and at Leisure Lake Mobil Home Park. The documents that are put out to the public, are very misleading to the amount of residents adjacent to area alternative reservoir #3. (See chapter 5 insert) All they ever mention is that there are 3 residents in area #3 and it is located adjacent to a TRAILOR PARK. Leisure Lake IS NOT a trailer park. It is a very UNIQUE mobile home park, and recreational facility. It is a 35 acre community and oasis for the 300+ senior citizens. You say, you may only remove 3 residents in alternative area #3. But maybe hundreds, in this community would have NO choice but to displace themselves due to SIGNIFICANT impacts.

69-1

69-2

(Chapter 5 insert
on next page)

X

Chapter 2 Alternatives to the Recommended Project

Imagined

You don't call 300+ people significant?

Residential Uses. None of the study areas would result in the displacement of a significant number of residences. Construction within Study Area 1 would require the removal of two residences; Study Area 3, three residences; and Study Area 5, up to six residences. No residences would be removed from Study Areas 2 or 4. As a result, these two study areas would be more suitable with respect to displacement of residences. Study Area 3 is located adjacent to an existing trailer park community (Leisure Lakes) at the intersection of Avenue E and SR-14. Study Area 5 is adjacent to residential and industrial uses (including a landfill) to the north and east.

69-2
(cont'd)

Significant Impacts Health Hazards

There ARE significant impacts by having alternative reservoir # 3, and NOT taking it off of the map. One of them being Health Hazards. Adjacent (as a matter of fact, right across the street) to alternative # 3 is a community (Leisure Lake) with a POPULATION of 300+ senior residents. They are NOT Twenty year old youths, who can pack up a suit case and have the physical strength or mental Stamina, to "Just Move on." The physical and mental strain and trauma ARE health hazards in themselves, and ARE VERY Significant to the elderly. By the County sanitation districts own admission, the impact report states another UNAVOIDABLE IMPACT: GROUND WATER QUALITY DEGRADATION.

69-3

PUBLIC NOTICE OF AVAILABILITY

Potentially Significant Environmental Effects: The LWRP 2020 Plan EIR assesses impacts for both construction and operational activities and identifies mitigation measures to avoid or reduce impacts. The recommended project would cause three significant and unavoidable impacts: (1) biological resources impacts caused by the elimination of mudflat habitat on Rosamond Dry Lake, (2) air quality impacts caused by construction emissions, and (3) secondary effects associated with the accommodation of growth in the region. Other project alternatives assessed in the EIR would add an additional significant and unavoidable impact: potential groundwater quality degradation resulting from long-term land application of recycled water.

Hydrology and Water Resources

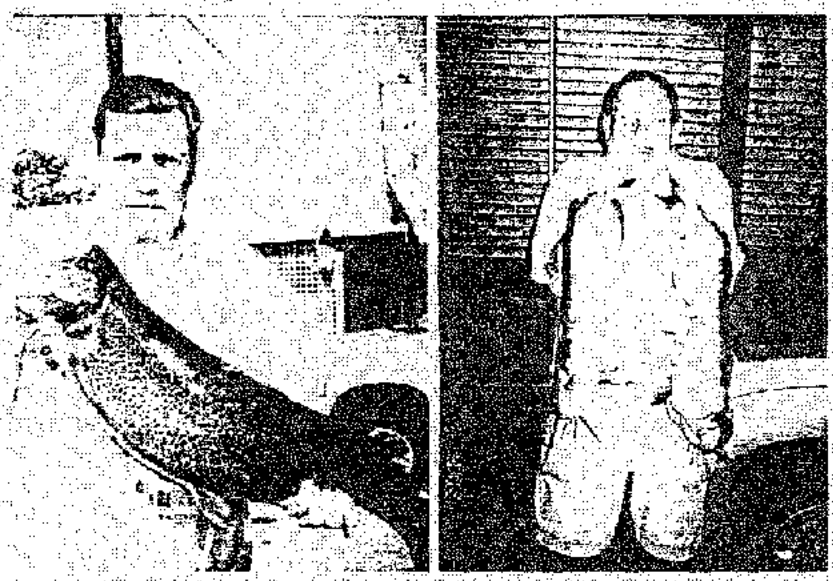

The proposed project would provide treatment to wastewater in the Antelope Valley, which would be available for reuse throughout the valley in the future, thereby assisting in decreasing the regional demand for groundwater. With implementation of Alternatives 3 and 4, application of recycled water would likely eventually reach the water table, which could degrade groundwater quality. Compliance with RWQCD

Be aware that there are THREE water wells at Leisure Lake Community. This senior population drinks this water and baths in this water. The wells also fill their pool and therapeutic whirlpool spa, which means the seniors would have constant bodily contact with this contamination, as they drink, bath, swim, & exercise quite often in this water. The wells also supplies their lake water, where they stock their fish. Also know, these seniors eat these fish, who now are swimming & living in contaminated waters. Seniors are more delicate, and even stand to be poisoned by eating their catch.

69-3

(cont'd)

This Is Our Fish Story...

...And Our Pictures Prove It!

Just a little Lake you say. Well it may be small but we've got some big fish in there. Chuck Monks, (left) 163, pulled this record breaking 12 3/4-lb. bass recently and Larry Verne, 171, did pretty well last year when he pulled in these two huge catfish. Our Lake was stocked with over 2,000 fish about nine years ago with small mouth bass, catfish, and perch and it seems that they are beginning to mature.

Leisure Lake also puts out its own newspaper called the "Wind Chime". This article came from July's issue.

NOTE: TAKE ALTERNATIVE #3 OFF of the map!

(TABLE ON page 5A)

By own admission on TABLE documents, it says reservoir #3 would have MORE nitrate levels, there WOULD be sludge digester gases, MORE chemical storage. (NaOCl + ammonia)

And MORE groundwater quality impact. Alternative #3 was mentioned as a "lesser" flood plain than the rest of the alternatives, BUT IT IS still a flood plain. I myself have seen the water overflow across the street. During these times, the senior population of this community, drive through this water + bring it in on their cars, their dogs run through it on their walks, and the people themselves walk through it. I ask YOU! Would you feel safe, looking across the street at that.... Sewage plant?

69-4

(cont'd)

Now lets move on to MORE health hazards that alternative #3 would cause to this community, of 300+ senior residents. We all know that as we get older, more things can and do often go wrong with your health. The health and body becomes more delicate. As a senior you do MORE to take care of yourself and to stay out of harms way. There are many in this community, who are healthy for "seniors". But there are also those who live here that already have existing health problems, that CAN NOT afford to be compounded by chemicals and dry sludge dust in their lungs, etc. etc. etc. If alternative #3 is ever allowed to be put by this community, I mean right

**Table ES-1
Comparison of Key Components**

	Wastewater Treatment		Effluent Management				
	Oxidation Ponds (mgd)	CAS/Tertiary (mgd)	Storage Reservoirs	Agricultural Land		Municipal Reuse	Piute Ponds
				Reuse	Application		
Alternative 1	16 (existing)	10	√	√		√	√
Alternative 2		26	√	√		√	√
Alternative 3	16 (existing)	10		√	√	√	√
Alternative 4		26		√	√	√	√

**Table ES-2
Comparison of Alternatives**

Potential Impact	Alternative 1	Alternative 2	Alternative 3	Alternative 4
Land Acquisition (acres)				
Agricultural Operations	4,170	4,650	13,880	13,940
Storage Reservoirs	1,100	750	0	0
Wastewater Treatment	5	15	5	15
Total Acreage	5,275	5,415	13,885	13,955
Displacement				
Residences potentially displaced	Less	Less	More	More
Effluent Quality				
Disinfection	Yes	Yes	Yes	Yes
Nitrate levels	More	Less	More	Less
TDS levels (mg/L)	~ 588	~ 588	~ 588	~ 588
Biosolids				
Biosolids disposal (tons/yr)	2,250	3,260	2,250	3,260
Air Emissions				
Sludge digester gas	Less	More	Less	More
Biosolids disposal truck trips	Less	More	Less	More
Chemical Storage				
NaOCl and ammonia	More	Less	More	Less
Biology				
Elimination of mudflat habitat	Same	Same	Same	Same
Maintenance of Piute Ponds Alkali mariposa lily habitat loss	Same 1,100 acres	Same 750 acres	Same none	Same None
Elimination of dry land habitat potentially used by sensitive species such as Mohave ground squirrel	Same*	Same*	Same*	Same*
Hydrology				
Flood plain encroachment	More	More	Less	Less
Piute Ponds water quality	Same	Same	Same	Same
Groundwater quality impact	Less	Less	More	More
Construction (noise, traffic, air)	More	More	Less	Less

69-4
(cont'd)

* Although Alternatives 2 and 4 would grade more total acreage, much of the agricultural land in the eastern agricultural area is pre-disturbed or otherwise of low habitat value for sensitive species. As a result, the reduction of quality habitat for each alternative is considered generally equivalent.

across the street, on their Doorstep, I am quite sure that the healthy will become sick and the sick will become sicker.

There are seniors in this park, now, on oxygen, or nebulizers. Many have allergies, some have asthma, or cancer, etc. They have moved here to find clean air and peace of mind. Let me introduce you to just one of the residents here at Lewis Lake. Mr. Bill Moyer, space # 99. He moved here from further north, in California, to be in that cleaner air. Mr. Moyer has lung damage already, due to chemicals from his previous employment. He is on a nebulizer and is highly sensitive to any chemicals. It is even very hard on him to just do a load of laundry. He just sold everything at his previous residence to purchase a home here, where up to now, he was content. He just doesn't know what he will do, "if we can't get #3 off of the map." Like the rest of us, Mr. Moyer agrees that, AS LONG as IT is an alternative, (#3) and remains on the map, the threat and stress would loom over Lewis Lake Community like a dark cloud and any peace that was ever felt here, would be gone forever. In its place would be a fearful anticipation for the day you would use - ALTERNATIVE RESERVOIR # 3! Who will be the one to come knock on Mr. Moyers Door (or anyone of the 300+) and tell him, he will now have to live

69-4

(cont'd)

next door to MORE Chemicals, and hazardous impacts? There is another lady (will withhold name for privacy) here, who just came home from the hospital with head surgery. I believe tumors. She just moved here 4 mo. ago and thought this to be her DREAM home. She is still paying on the loan, and still recovering from her surgery. This precious senior needs anything, -- But another Health-hazard right across the street, from her. PLEASE take alternative #3, off of the map.

69-5

Don & Janie Williams, more residents of Leisure Lake, have been dealing with the stress and strain of their son being over in Tikrit (spelling?) Iraq, and their hearts are breaking as their grandson also is ready to be sent over there. Now the threat of their home being destroyed, is an added almost unbearable grief that can be avoided by: TAKING ALTERNATIVE RESERVOIR #3, OFF OF THE MAP!

(cont'd)

Connie Hersten sp. #30, "Senior of the Year," also lives here, and faces total destruction on everything she worked for, all her life. Along with the other 299+ seniors, her home stays in the threat of being destroyed. With all the plaques presented to her, and "PAPER Thank You's" for her service in the community & city of Lancaster, I feel she needs something a little more, right now. She and the other 300 need your

support, to please get & take
ALTERNATIVE RESERVOIR #3
OFF of the map!

Now,

Getting back to the health of Seniors,
and the decline of health as you become
older. With today's economy and HMO
benefit cuts, increasing costs of co-payments,
and medications, you need to soften the
blow for this Senior community and NOT
put Death on their DOORSTEP.

Take ALTERNATIVE RESERVOIR #3
OFF of the map!

69-5

(cont'd)

Summary: We all know how the Big Guys
try to minimize the truth about chemicals
and/or Health Hazards of any kind - and
their hidden dangerous results and effects
they contain. But we all also know, the
real truth about chemical underground
leakage, or flood run offs, or about breathing
fly away chemical dust, ect. And that truth
is, that in the longrun, these people will
be the VICTIMS, of all these impacts, in one
way or another. Remember Erin Brockovich?
That community swam in their water,
and drank & bathed in it too. AGAIN!
Please do not contaminate or pollute this
community and its residents. I think
there must be a law against putting
such a reservoir so very dangerously
close to so many people. Senior people.

69-6

At the end of every impact report, the health hazards are labeled "LESS than significant" for Alternative Area #3. NO where on your maps or documents does it ever mention "211 individual residences" or the 300+ "Residents" (all paying house taxes) There are thousands of people on the internet getting this information, possibly to vote for or against this alternative reservoir #3 being placed "right across the street from Leisure Lake, and they are MIS-LED to believe there are only 3 residences in this area and a "Trailer Park." The Health Hazards here, I believe are MORE than significant, and may even border ELDER ABUSE, by knowingly putting this many seniors at risk.

TAKE ALTERNATIVE #3 OFF of the map!
SAVE the SENIORS
SAVE Leisure Lake
SAVE an entire community.

69-6

(cont'd)

Next page (10)
 is a little on CEQA

CEQA - Significant Impacts (SEE BELOW)

CEQA says there is a significant impact, if - there is minority and/or low economic population —
Road note under "Displaces substantial numbers of people"

69-7

Chapter 4 Environmental Setting, Impacts, and Mitigation

4.13.2 Environmental Impacts and Mitigation Measures

Thresholds of Significance

According to the CEQA Guidelines, a proposed project would have a significant effect on population and housing if it:

- Induces substantial population growth in an area, either directly (for example, proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).
- Displaces substantial numbers of existing housing units, necessitating the construction of replacement housing elsewhere.

and/or

- Displaces substantial numbers of people, necessitating the construction of replacement housing elsewhere. They will have no choice but to displace themselves w/ all the impacts. (SIGNIFICANT IMPACTS) ALC 6
- Contributes to the secondary effects of growth.
- Affects minority or low economic populations disproportionately.

This community, being all Seniors, does, make them a low economic population.

And at 300+ strong, it does make them a POPULATION. You also can't get any lower income than living on a fixed

S. Security check, of which many seniors get less than \$1,000 per mo.

I believe, that is Below poverty level.

And also there are Seniors at Leisure Lake who spent everything they had on these beautiful "Mobil Houses,"

(not trailers, as portrayed in chapter 5 of the documents, and through out the paperwork) ranging from \$40,000 to \$60,000. Some are paying loans up to 12% in order to buy them.

The space rents are moderate and affordable for Seniors living on fixed incomes. And in spite of inflation during past 20 years, space rent increases have always been minimal. There are many, many, more reasons why THIS PLACE,

would be hard to RE-PLACE, if these Seniors were to be DISPLACED! The

CEQA says, that population which was displaced would have to be put to an EQUAL Comparable place to live. There is

NO equal comparable OAS in this desert, to Leisure Lake. NO equal 5 Star Comparable quality of living, that this community is accustomed to. THIS 5 star affordable living.

69-7

(cont'd)

CEQA -- continued

So, help prevent the possibility of UNAVOIDABLE displacements, due to impacts, unavoidable impacts, and significant impacts, in this community at Leisure Lake.

SUPPORT

Taking alternative reservoir #3 OFF of the maps

In chapter four, page 4-193, under impacts - it is written that the threshold of impact to alternative area #3 is less than significant. It is, instead Very Significant to this Senior Community. This area needs to be re-evaluated. Seriously re-evaluated.

69-7

(cont'd)

UNDER "PUBLIC IMPACT" AGAIN it is (see pg. 12A) mentioned area #3 is "ADJACENT" to Leisure Lake. NO WHERE is it EVER mentioned the amount of people living there. The POPULATION of 300+ seniors NEVER get mentioned. THERE IS AN ENVIRONMENTAL JUSTICE IMPACT

Mitigation Measure 4.13-2: No persons of low or moderate income shall be displaced unless and until there is a comparable replacement housing unit available and ready for occupancy by such displaced persons or families at rents comparable to those at the time of their displacement.

Significance After Mitigation If the #3 reservoir is constructed, these people will be forced to displace themselves. IT IS SIGNIFICANT to 300+ seniors. There is no alternative place to Leisure Lake, that is Leisure Lake.

THERE IS A SUBSTANTIAL amount of people here.

Less than significant.

IT'S JUST THAT IT HAS BEEN MINIMISED!!

District No. 14 has conducted an extensive program alternatives analysis to minimize the impacts of the project (see Chapter 5.0 of this document). Since long-term impacts to the local area would be less than significant, and since the general population of the local area is not disproportionately represented by minority or low income groups, no environmental justice impact would be expected as a result of the project.

The general population in Area #3 is represented by minority's (Senior citizens) and they ARE a low income group. How dare you say -

Mitigation Measure NO environmental justice impact would be expected. . .

Alternatives 1, 2, 3, and 4

No mitigation measures are necessary.

why are there no mitigation measures needed for Area #3 with 300+ people and 211 residences? (cont'd)

Significance After Mitigation

Less than significant.

why? - there was no mitigation measures needed. Area #3 had a significant impact.

DES

Chapter 5 Alternatives to the Recommended Project

Public Impact

Storage reservoirs can impact the public by displacing residents and businesses or causing an insect nuisance for motorists along SR-14 or Sierra Highway. As documented in the LWRP 2020 Plan, Study Areas 1, 3, and 5 are the least desirable with respect to public impact. Aerial photographs and site surveys indicate that siting storage reservoirs within Study Area 1 would require the displacement of two residences; Study Area 3, three residences; and Study Area 5, up to six residences. No residences or businesses would be displaced from Study Areas 2 and 4. As a result, these two study areas are more desirable. It should be noted that Study Area 3 is located adjacent to Leisure Lake, a mobile home community that is located at the intersection of Avenue E and SR-14. In addition, Study Area 5 is located adjacent to industrial uses (including a landfill) to the south and east.

There are in fact 300+ VERY MISLEADING residences

Again - Never any mention of the 211 homes and 300+ residents

During the summer months, standing water in storage reservoirs can lead to mosquito and midge formation. If reservoirs were constructed within Study Area 1, the prevailing winds out of the west would

THIS POPULATION, THESE People, HAVE NOT even BEEN counted or included in your EVALUATIONS!

QUESTION

Has anyone from S.A. County Sanitation District or any Board Members of District 14, ever submit an inventory of chemicals to be used and/or stored on site of Alternative Reservoir #3 to the Health Dept.? And also explain that this would take place a few feet from a community of 300+ senior citizen population?

69-8

I would like a copy of that report, and its results.

Send to: Silvee Rodriguez
44420 Cedar Ave.
Lancaster, Ca. 93534

4.10.3 Environmental Impacts and Mitigation Measures

Thresholds of Significance

Significance criteria under CEQA Guidelines state that a project will normally have a significant effect on the environment if it will create a potential public hazard, involve the use, production, or disposal of materials that pose a hazard to people, animal, or plant populations in the area affected, or if it would interfere with emergency response plans or emergency evacuation plans with regard to hazardous materials and chemicals.

Again, the number of people at Leisure Lake are never mentioned (300+) and the closeness of alternative #3 to these people are never mentioned. THESE TWO things alone, make a BIG difference.

4.10 CHEMICALS, HAZARDOUS MATERIALS, AND ENERGY

2

This section assesses potential hazards that may arise as a result of the proposed project.

4.10.1 Environmental Setting

Chemical Usage

Chemicals used in the wastewater treatment process at the LWRP include NaOCl, ammonia, ferrous chloride, and aluminum sulfate (alum). These process chemicals are stored in several aboveground storage tanks on site. In addition to process chemicals, District No. 14 also maintains several aboveground storage tanks for propane, diesel, and gasoline. Table 4.10-1 summarizes the current and projected chemical quantities used at the LWRP for each alternative. Projected chemical usage was estimated assuming that quantities would increase commensurate with projected flow rates. Chemicals are delivered to the LWRP on a regular basis. Table 4.5-1 shows the number of deliveries per month for chemicals delivered to the LWRP.

Table 4.10-1
Current and Projected Average Annual Chemical Usage*

	CURRENT Year 2002	ALTERNATIVES 1 & 3 Year 2020	ALTERNATIVES 2 & 4 Year 2020
Process Chemicals			
NaOCl	400,000	980,000	750,000
Alum	120,000	2,000	5,000
Ammonia	32,000	100,000	80,000
Ferrous Chloride	24,000	70,000	110,000
Cationic polymer	N/A	200,000	550,000
Sodium Bisulfate	N/A	450,000	320,000
Other Chemicals			
Propane	500	750	750
Diesel (Plant Equipment)	1,250	1,500	1,500
Diesel (General)	1,000	1,500	1,500
Gasoline	2,500	3,500	3,500

Source: District No. 14
(a) Values in gallons

NaOCl is currently stored in liquid form on site and is used for disinfection purposes. NaOCl solutions are used in place of gaseous chlorine, an acutely toxic chemical. NaOCl solutions are unstable and some

chlorine vapor can be released in the event of a spill. However, chlorine vapor production from using NaOCl is minimal and poses no public health risk in comparison to using pressurized gaseous chlorine.

3

Ammonia is used seasonally in conjunction with NaOCl in the disinfection process. In the event of high nitrogen levels, ammonia is added to induce production of chloramines, which aids disinfection. In the event of a spill, ammonia can vaporize into the air, remaining low to the ground. Low-lying ammonia clouds can be hazardous to nearby areas. The LWRP utilizes aqueous ammonia which is less volatile than other forms of ammonia such as anhydrate ammonia.

Ferrous chloride is also used on site for coagulation. Although ferrous chloride is not listed as an acutely hazardous material, it can become dangerous if heated to decomposition or on contact with acids or acid fumes, when it can emit highly toxic chloride fumes.

Aluminum sulfate, commonly known as alum, is a metal coagulant that enhances sedimentation. It is used during the tertiary treatment process in the final sedimentation step. Alum is a grayish-white, crystallized solid.

In addition to the treatment chemicals stored on site, District No. 14 operates a water quality laboratory at the LWRP. The laboratory stores and utilizes small quantities of chemicals used in EPA-approved testing methods.

HISTORICAL VALUE of REDMAN

One last thing I would like to bring to your attention, is the historical value of Redman.

William Redman, who the community was named after, was a part of A.V.'s colorful past. He met Frieda Ridder, whose family (german immigrants) came from Nebraska, along with 60 families to settle Palmdale. These early families named Palmdale, Palmenthal, after palm trees. William and Frieda were married. Early 1900's William Redman was a postmaster in Lancaster, and later he was Board of Directors to A.V. Fairgrounds. He is why we have the "Redman Grandstands." They were named after William Redman. He remained on the Board of Directors 1941 to 1955.

As another tribute to William Redman, I propose you leave something of Redman community, he would have been proud to see. The 35 acres at Leisure Lake, I believe are the only Park like grounds, literally an OASIS, and the largest, condensed population in the Redman Community, and should be preserved without the stench, contamination, and unsightly sewage reservoirs, right across the street. It seems rather sad, a waste and a loss of history to just make most of Redman, a Big Toilet.

Although this community rides on the Coat tails of Lancaster,

69-9

it is still Redman Co. The property's parcels across the street, (where the alternative reservoir #3 would be) from Leisure Lake are listed as being in "Redman Co. (see attached)"
Mail will be and has been delivered to Leisure Lake, addressed to "Redman Calif." (See attached) I believe the community can still legally form their own town council. I just think many people are unaware of this. Myself and others, plan to let the community know.

69-9

(cont'd)

SUPPORT ABORTING ALTERNATIVE #3

SAVE the Seniors
Save Leisure Lake

Save a community of 300+

Save a 35 Acre piece of Redman
for the Seniors

COMMUNITY ACTIVITIES

"Leisure Lake Recreation Club"

All residents are members of the Club

The Club sponsors most of the activities in the park.

INCLUDING

"Wind Chimes" The park news publication

Friday night Dinners

Friday night BINGO

Thanksgiving Entertainment

Holiday Entertainment

and much more.

"Homeowner's Association"

This is an organization that acts as a go between with management and the residents. It also sponsors the Disaster Preparation Committee.

GSMOL (Golden State Mobilhome League, Inc.) This "Statewide" organization updates residents on new state statutes and the rights of mobile home owners. Their membership includes a subscription to the "Californian" a California state wide publication.

NOTE: The above listed organizations are run by elected officers and welcome qualified residents to participate.

PETITIONS against,
ALTERNATIVE RESERVOIR #3

October 30, 2003

Silvie Rodriguez
44420 Cedar Avenue
Lancaster, CA 93534

Dear Ms. Rodriguez:

Thank you for contacting me about your concerns in regard to the Lancaster Water Reclamation Plant 2020 Facilities Plan. Although my office is not directly involved in the decision-making process on this project, I am intensely interested in seeing that only the best solutions are used in meeting our Valley's needs for environmentally sound wastewater treatment and water reclamation.

I have designated a member of my staff to attend meetings and hearings concerning the 2020 Facilities Plan and to keep me apprised of developments. I will not hesitate to speak out in support of acceptable planning or to strongly oppose decisions which run counter to the best interests of the people who elected me to represent them in Sacramento.

In the case of the pond site you referenced in your letter to me, I was pleased to learn that the alternative location is NOT being supported or recommended to the County Sanitation District Board of Directors by their staff. Although the California Environmental Quality Act (CEQA) requires that all alternatives be considered before a final decision - even those as ill-conceived as the pond proposal adjacent to Leisure Lake Mobile Home Park - I have every confidence that recommendations against the site by the Sanitation District's professional staff will be accepted.

In any event, please rest assured that I hear and support your concerns about possible negative effects on your lives and property from any adoption of the non-recommended pond site, and I will continue to closely monitor developments. Should there be any unexpected shift towards adoption of the non-recommended site, I will bring to bear all of the influence of my office to deny final approval.

Thank you again for providing me with your information. And please stay in touch with me directly or through my staff in the district office in Lancaster.

Sincerely,

SHARON RUNNER
Assemblywoman, 36th District

PETITIONS

I want to mention that many names on these petitions, are people who will be or are now seniors, and someday also wants to move to Leisure Lake. I myself, ALSO want to be able to move there someday.

Please Protect Leisure Lake,
and its Senior Population
a most UNIQUE community

The "NOTICE" was delivered poorly. I got it two days before the OCT. 29th meeting. I had only 12 days to get signatures, educate myself on the project, look & study maps, write letters, research & collect my petitions. There are 144 names on the petitions. But I only had two days to give to that part of my letter. Think how many would have signed in two months!

69-10

PS The ARE more petitions to follow

PETITION

We, the undersigned, petition the County Sanitation Districts of Los Angeles County to remove from the Lancaster Water Reclamation Plant 2020 Facilities Plan, the proposed alternative storage reservoir between West Ave D and West Ave E-8, bordered by 20th Street West and Sierra Highway.

69-11

This reservoir would pose an environmental hazard, air quality would be affected producing unpleasant odor, degrade the well water, and adversely affect property values. No reservoir should be located at anytime south of Ave D.

PETITION

We, the undersigned, petition the County Sanitation Districts of Los Angeles County to remove from the Lancaster Water Reclamation Plant 2020 Facilities Plan, the proposed alternative storage reservoir between West Ave D and West Ave E-8, bordered by 20th Street West and Sierra Highway.
